

Course Title: Health Occupations

Description:

This 32 week high school elective course is designed for students interested in health care occupations. Due to challenging work and mature topics, the Health Occupations class is recommended for high school juniors and seniors. Exceptions can be made for freshmen and sophomores with approval.

The class is divided into several different learning opportunities. Traditional in-class lectures and discussions will be supplemented with hands-on laboratories to include learning medical procedures using medical equipment and role playing. An emphasis will be placed on medical vocabulary and medical application questions. Students will be introduced to various health care career fields through discussions and guest speakers from the medical profession.

American Heart Association (AHA) BLS healthcare provider CPR will be covered. Students have the option of paying an additional fee for the certification card.

Prerequisites: Grades 11+ and completion of Biology

Thursdays 10:10 – 11:40 AM; 32 weeks

Minimum 6 students required to start
